

the cholinergic neuron its pdf

Acetylcholine (ACh) is an organic chemical that functions in the brain and body of many types of animals, including humans, as a neurotransmitter—a chemical message released by nerve cells to send signals to other cells [neurons, muscle cells, and gland cells]. Its name is derived from its chemical structure: it is an ester of acetic acid and ...

Acetylcholine - Wikipedia

A neuron is a specialized type of cell found in the bodies of all animals except sponges, and a few other simpler animals. The features that define a neuron are electrical excitability and the presence of synapses, which are complex membrane junctions that transmit signals to other cells.

Neuron - Wikipedia

3. Choose the proper answer from the following key to respond to the descriptions relating to spinal cord anatomy. Key: a. afferent b. efferent c. both afferent and efferent d. association
